Commercial production website support

Deployment lead on a team web project

Cloud, containers, automation, and security

PROFILE

Junior DevOps / Cloud Engineer focused on resilient infrastructure, predictable releases, and automation that reduces manual operational work.

- Hands-on with Linux, Docker, Kubernetes, cloud deployment workflows, databases, and CI/CD.
- Comfortable connecting infrastructure, application configuration, and release readiness.
- Interested in systems that are secure, observable, repeatable, and easy for teams to maintain.

CORE SKILLS

Linux	Docker	Kubernetes	Azure
Terraform	CI/CD	GitHub Actions	Python
MySQL	PostgreSQL	Liquibase	Bash
SIEM	IDS/IPS	AI Integration	API Integration

TECHNICAL EXPERIENCE

Commercial Project - Vid Franko

DevOps / Deployment Support

- Contributed to production launch support for a commercial website with a focus on stability, availability, and predictable releases.
- Applied classic DevOps practices: environment configuration, production variables, build verification, deployment control, and post-release validation.
- Supported repeatable deployment steps, service availability checks, log and configuration review, and quick issue response during operational handoff.

Team Project - Volunteer Site

DevOps / Deployment Lead

- Contributed to deployment and environment setup for a production-oriented team web project.
- Worked with cloud hosting, application configuration, production variables, and release preparation.
- Supported database connectivity and backend readiness during launch and iteration.

Hands-on DevOps Practice

Mate academy training

- Built Kubernetes practice projects with Pods, Services, Deployments, HPA, DaemonSets, CronJobs, ConfigMaps, Secrets, and Persistent Volumes.
- Practiced MySQL administration: users, backup and restore, slow query logs, error logs, and migration rollback scenarios.
- Worked with Terraform and Azure fundamentals for infrastructure provisioning, state, modules, and validation workflows.
- Implemented CI/CD delivery workflows with environment-based configuration and security in mind.

FEATURED PROJECTS

Portfolio Website with AI Assistant

React, OpenRouter, AI Chat, Portfolio

Built a personal React portfolio with a floating AI assistant, technology pages, learning platform sections, and server-side OpenRouter API integration.

Links: [Portfolio Website](#) | [Repository](#)

AI Crypto CAT Bot

Python, GPT API, Market Data, Automation

Built a Telegram bot for crypto market analysis with GPT-powered insights and reports in Markdown, HTML, and PDF formats.

Links: [Repository](#)

KROK Worldbuilder Bot

AI, Telegram Bot, Prompt Engineering

Created an AI assistant for the KROK universe with multilingual support, lore browsing, and image prompt generation.

Links: [Repository](#)

DevOps AI Agent

DevOps, AI, Python, API Integration

Created an automation-oriented bot integrated with the OpenRouter API and configured through environment variables.

CERTIFICATIONS

- DevOps Engineer Professional Certificate - Mate academy, 2026, 462+ hands-on tasks completed.
- Google Cybersecurity Certificate - Google / Coursera, 2024.
- Project Management in IT - Beetroot Academy, 2023.
- English Course - 12 Project, B2 Grade A, 2024.

LANGUAGES

Ukrainian: Native. English: Upper-Intermediate (B2).

EDUCATION

- Architecture and Urban Planning - Odesa State Academy of Civil Engineering and Architecture.
- Software-related studies - Popov Academy of Telecommunications.

LEARNING LINKS

Platforms: 12 Project | Beetroot Academy | Mate academy | Prometheus

EARLIER EXPERIENCE

- 2022-2026: Outsourcing work and volunteer project ownership: task coordination, stakeholder communication, launch support, and daily workflow management.
- 2019-2022: Self-employed: online product promotion and demand generation using digital channels to support sales.
- 2017-2019: Business partnership: communication with wholesale buyers, negotiations, and deal coordination.
- 2016-2017: Real Estate Agent at NBR Real Estate: supported property transactions and client communication.

ABOUT ME

I am a Junior DevOps Engineer focused on practical infrastructure work: clear deployment flow, stable environments, automation, and reliable handoff between development and operations. I learn through building and troubleshooting, so I pay attention to logs, configuration, repeatable steps, and the small details that make systems easier to maintain.

My background includes project coordination, communication with stakeholders, and responsibility for delivery, which helps me stay organized under pressure and connect technical work with real project needs. Through DevOps, cybersecurity, project management, and English courses, I built a structured way of learning and working: defining goals, breaking work into steps, creating roadmaps, tracking progress, and adjusting the plan when new information appears.

I am looking for a team where I can grow through hands-on DevOps tasks, contribute to infrastructure quality, and keep improving my cloud, CI/CD, automation, and operational thinking.

ATS KEYWORDS

Junior DevOps Engineer, Cloud Engineer, Infrastructure as Code, containerization, Kubernetes, Docker, Linux administration, Azure, Terraform, CI/CD, GitHub Actions, Python automation, Bash scripting, MySQL, PostgreSQL, Liquibase, monitoring, security fundamentals, SIEM, IDS/IPS.
